“we can do anything we want, but we cannot do everything we want.”

Why IT Project Fail

There are many factors that effect on failure or success of one project.

Now, we are going to pick up 6 commons causes of project failure:

1. Constituent Alignment

Stakeholders

- Executive
- Sponsors
- Other Participants

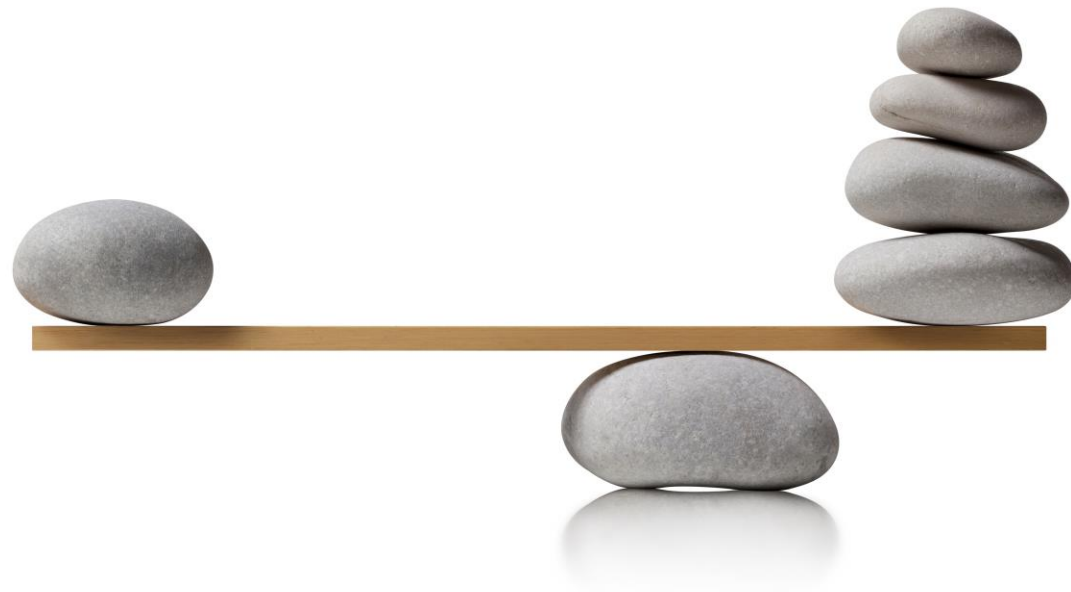

2. Proactive Risk Management

3. Performance Measurement

- Where projects are relative to where they should be at various points in time.
- The role of Earned Value Management (EVM) is important here

4. Project Scope Definition and Management

- Gathering user requirements
- There is pressure to execute before the project is adequately defined
- There is no rigorous scope management.

5. Critical Project Communication

Project managers and stakeholders to be aware of project progress and challenges at every stage.

6. Methodology Usage

- This task is made easier via automation and tools that incorporate project workflow into the overall project execution lifecycle.

Successful Project

- Technology
- How, where, what, and by whom it is done
